RELAY ASSEMBLY FOR AUXILIARY BATTERY

The following assembly will prevent discharging of the Auxiliary Battery during standby (when the Logic Box has no power). This should be used if the Vehicle Battery is not directly connected to the Logic Box or when a master switch is used to supply Power to the Logic Box. This assembly will complete the Auxiliary Battery circuitry only when Power is supplied to the Logic Box. Note: This will not allow operation of the monitor during standby.

Install the relay and connector assembly inside the Auxiliary Battery Box.
