STYLE 3700 AEROMASTER 12® AUTOMATIC NOZZLE
OPERATING INSTRUCTIONS

The following is intended to provide the basic instructions for operating an AeroMaster 12 nozzle. Read and understand these operating instructions before use.

PRODUCT RATINGS

Flow: \(1585\text{-}3200 \text{ gpm (6000 lpm-12000 lpm)} \atop 150 \text{ psi}^{*} \text{ (10 bar}^{*} \text{)}\)

Maximum Pressure: \(232 \text{ psi/16 bar}\)

Minimum Voltage at motor: \(10 \text{ volts for a 12 volt system; } 20 \text{ volts for 24 volt system}\)

Maximum Motor Current Draw: \(3 \text{ amps for 12 volt nozzle; } 1.5 \text{ amps for 24 volt nozzle.}\)

Inlet Size: \(4-1/2" \text{ (115mm)}\)

*Pressure measured at the inlet of a Style 3000 AeroMaster 12 monitor.
PRODUCT WARNINGS

⚠️ WARNING ⚠️ Charge all lines slowly to facilitate a controlled water pressure build-up during start-up. Open and close slowly. Rapid opening will produce a sudden thrust. Rapid opening and closing can cause water hammer. Have your monitor properly supported to control the reaction force created by the stream.

⚠️ WARNING ⚠️ At pressures below that indicated on the label, the nozzle will have reduced flow and reach. Be sure you have enough flow and pressure for the situation (See IFSTA and NFPA manuals for guidelines).

⚠️ WARNING ⚠️ Ensure the AeroMaster 12 nozzle is aimed in a direction that is safe, prior to flowing.

⚠️ WARNING ⚠️ Ensure the thread on the nozzle swivel is matched to the thread on the monitor.

PRODUCT CAUTIONS

⚠️ CAUTION ⚠️ Noise hazard. Hearing protection required while discharging foam or water.

⚠️ CAUTION ⚠️ If any tags or bands on the nozzle are worn or damaged and cannot be easily read, they should be replaced.

⚠️ CAUTION ⚠️ Intended for use with fresh water or standard firefighting foams. Not recommended for use with salt water. After use with foam or salt water, flush with fresh water.

⚠️ CAUTION ⚠️ For firefighting use only.

⚠️ CAUTION ⚠️ Do not over tighten the nozzle onto the monitor.

⚠️ CAUTION ⚠️ The nozzle is configured for optimum performance. Do not alter in any manner.

⚠️ CAUTION ⚠️ Your nozzle should be inspected prior to, and after each use, to ensure it is in good operating condition. Periodically, an unanticipated incident may occur where the nozzle is used in a manner that is inconsistent with standard operating practices and those listed in IFSTA. A partial list of potential misuses follows:

- Operating above maximum rated pressure and flow.
- Not draining, and allowing water to freeze inside the nozzle.
- Dropping the nozzle from a height where damage is incurred.
- Prolonged exposure to temperatures above +130 degrees F, or below -25 degrees F.
- Operating in a corrosive environment.
- Other misuse that might be unique to your specific firefighting environment.

There are many “telltale” signs that indicate nozzle repair is in order, such as:

- Controls that are either inoperable or difficult to operate.
- Excessive wear.
- Poor discharge performance.
- Water leaks.

If any of the above situations are encountered, the nozzle should be taken out of service and repaired, plus tested by qualified nozzle technicians, prior to placing it back in service.
OPERATING INSTRUCTIONS

Electric Controls: To change the spray angle, push the pattern control toggle switch to either SS (straight stream) or fog positions. The pattern sleeve of the nozzle will move toward the desired stream only when the switch is pressed and stop when the switch is released.

Manual Override: Pull manual override knob out. Once out, rotate the knob to move the pattern sleeve to the desired stream position. When finished, push and turn the override knob until it goes back into the stored position.

MAINTENANCE

- Under normal conditions, periodically flushing the nozzle with clean water and cleaning grit and dirt from the exterior moving parts will allow the nozzle to operate as designed.
- Over time the seals and turbine teeth may need to be replaced. This can be accomplished by purchasing the appropriate Akron repair parts. Use qualified maintenance mechanics or return the nozzle to Akron Brass for repair.
