WARRANTY AND DISCLAIMER: We warrant Akron Brass products for a period of five (5) years after purchase against defects in materials or workmanship. Akron Brass will repair or replace product which fails to satisfy these warranties except failures caused by normal wear, abuse, misuse, negligence, or improper installation, use, maintenance, or storage. Products must be promptly returned to Akron Brass for warranty service. We will not be responsible for: wear and tear; any improper installation, use, maintenance or storage; negligence of the owner or user; repair or modification after delivery; damage; failure to follow our instructions or warnings. THIS IS A LIMITED WARRANTY AND IS THE SOLE AND EXCLUSIVE WARRANTY OF AKRON BRASS. NO OTHER EXPRESS OR IMPLIED WARRANTIES ARE MADE. NO ACTION FOR BREACH OF WARRANTY SHOULD BE BROUGHT AGAINST AKRON BRASS AFTER THE PERIOD SPECIFIED IN THIS DOCUMENT. AKRON BRASS DISCLAIMS ALL OTHER WARRANTIES INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. THIS LIMITED WARRANTY IS NOT TRANSFERABLE. THE MANUFACTURER'S RESPONSIBILITY UNDER THIS LIMITED WARRANTY IS LIMITED TO REPAIRS OR REPLACEMENT AS DESCRIBED ABOVE. IN NO EVENT SHALL AKRON BRASS BE LIABLE TO ANYONE FOR ANY LOSS, DAMAGE, OR INJURY WHETHER DIRECT, INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL, ARISING OUT OF THE USE OR INABILITY TO USE AKRON BRASS PRODUCTS OR ANY PARTS THEREOF, OR FROM ANY BREACH OF WARRANTY OR CONTRACT. THIS LIMITATION OF LIABILITY INCLUDES, BUT IS NOT LIMITED TO, ANY LOSS OF PROFITS) FROM ANY CAUSE WHATSOEVER. NO PERSON HAS AUTHORITY TO CHANGE THIS WARRANTY.

FOR 810 1" VALVE FIEL SERVICE KIT
STYLE 9124
STYLE 9124
USE THESE ILLUSTRATIONS TO IDENTIFY THE VARIOUS PARTS IN THIS KIT

Item No. 1
P/N 7-57-055
O-Ring - Trunnion Bearing

Item No. 2
PN 7-57-034
O-Ring - Trunnion

Item No. 4
PN 7-57-050
O-Ring - Seat

Item No. 5
PN 70000565
Valve Seat

Item No. 7
PN 7-57-061
O-Ring - Adapter

Item No. 8
PN 7-04-006
Valve Ball
INSTRUCTIONS FOR INSTALLING THE PARTS IN THIS KIT DISASSEMBLY

VALVE BODY

NOTE:  This kit includes extra O-Rings for the different variations of valves. Identify the correct replacement O-Rings when removing the old ones.

1. Remove the four (4) hex bolts (A) which hold the outlet adapter (B) to the body (C). Remove the adapter (B) from the valve body.
2. Using a face spanner (found in the Style 9200 tool kit), unscrew the seat housing (D) and remove it from the valve body (C). (This is a fine thread and if the valve has been in service for a long period of time, it may be difficult to remove.)
3. Remove the two O-Rings (6 & 7) on the seat housing (D).
4. Install the seat retaining ring tool (found in the Style 9200 tool kit), in a vice with the correct size up. Place the seat housing (D) over the tool and fit the tool into the notches in the seat retaining ring (E).

5. Use the face spanner on the seat housing (D) to remove the seat retaining ring (E) from the housing. If the valve has been in service for a long time, it may be necessary to clean the threads for the seat retaining ring (E) with a hand-held wire brush.

6. Remove the seat (5) and O-Ring (4) from the seat housing (D), if so equipped.

7. Remove the threaded trunnion (F) from the bottom of the valve. Remove the old O-Ring (3).

8. Rotate the valve to the open position and remove the ball (8).

NOTES:
- There have been several different seats used over the years that may look different from the new seat in the service kit. The kit seat is a universal replacement. The plastic ball in the kit will fit valves equipped with a metal ball. The slot in the new ball may be 90 degrees from the slot in the original ball. To install the new ball, place it in the valve in the open position. Adjustment of the handle stop may be required to maintain the same handle, open/close quadrant.

ASSEMBLY - VALVE BODY

NOTE: Use Parker O-Ring lubricant or equivalent petroleum base lubricant for all O-Rings before assembly. Do not lubricate the valve ball (8).

1. Replace the threaded trunnion O-Ring (3).

2. Replace the ball (8) in the valve body (C) and install the trunnion (F).

3. Install the O-Ring (4) and seat (5) into the seat housing (D). Install the seat retaining ring (E).

4. Tighten the seat retaining ring (E), using the face spanner and seat retaining ring tool, until snug. **DO NOT OVER TIGHTEN.**

5. Install the two (2) seat housing O-Rings (6 & 7) and thread the seat housing subassembly (D) into the body (C).

6. With the ball in the closed position, adjust the seat housing until resistance is felt when opening and closing the valve. The seat (5) should just touch the ball (8). (Over tightening will cause excessive valve wear and make the valve difficult to operate.)

7. Place the valve in the closed position and test as follows:
   - If the valve is out of the truck, hold the valve with the inlet side up and fill the body with water.
   - If the valve is in the truck, allow the water to flow into the valve. Observe the outlet of the valve. If a leak is found, the seat housing can be tightened a 1/16 of a turn at a time with the face spanner until the leak is stopped.

8. Replace the adapter (B) and tighten the four (4) bolts (A) in an “X” pattern.

ADJUSTMENT AND REPAIR OF R* AND Y* TYPE HANDLES

DISASSEMBLY - TOP TRUNNION ASSEMBLY

1. Remove the socket head cap screw (G) that holds the handle (H) on.

2. Remove the handle from the trunnion (L). The screw that protrudes is a stop screw (J) and should be left in place unless replacing these parts.

3. Remove the four (4) recessed screws (I) which secure the trunnion bearing (K) to the body (C).

4. Pull the trunnion (L) and trunnion bearing (K). Push the trunnion (L) out of the bottom of the trunnion bearing (K). This will expose the last two (2) O-Rings (1 & 2) which are supplied in the service kit.

NOTE: There are eight (8) threaded holes in the top of the body (C) which allow for the various handle positions.

ASSEMBLY - TOP TRUNNION ASSEMBLY

NOTE: Use Parker O-Ring lubricant or equivalent petroleum base lubricant for all O-Rings. Lubricate all O-Rings before assembly. DO NOT lubricate the ball shutoff.

1. Replace the trunnion O-Ring (2) and the trunnion bearing O-Ring (I).

2. Turn the ball (8) to the open position.

3. Insert the trunnion (L) into the valve body and align it in the ball slot.

4. Slide the trunnion bearing (K) down over the trunnion (L).

5. Position the trunnion bearing (K) for the desired handle position.

6. Install the four (4) screws (I) to secure the trunnion bearing (K) to the body (C).

7. Place the handle (H) on the splines of the trunnion (L) in the open position. (The ball should still be in the open position from Step #2.)

8. Replace the washer (M) and large socket head cap screw (G).

*R handle - remote control/without Tork-Lok®

*Y handle - non-locking direct control.
