ASSEMBLY - TOP TRUNNION ASSEMBLY

NOTE: Use Parker O-Ring lubricant or equivalent petroleum base lubricant for all O-Rings. Lubricate all O-Rings before assembly. DO NOT lubricate the ball shutoff.

1. Replace the trunnion O-Ring (2) and trunnion bearing O-Ring (1).
2. Turn the ball to the open position.
3. Install the trunnion (1) into the valve body and align in the ball slot.
4. Slide the trunnion bearing (3) over the trunnion (1).
5. Position the trunnion bearing (3) over the trunnion (1).
6. Install the four (4) screws (5) into the trunnion bearing (2) to the body (6).
7. Place the handle (7) on the handle of the trunnion (1) in the open position. The ball should still be in the open position from Step #2.
8. Replace the washer (8) and large socket head cap screw (9).

INSTRUCTIONS FOR INSTALLING THE PARTS IN THIS KIT

DISASSEMBLY

NOTE: This kit includes extra O-Rings for the different variations of valves. Identify the correct replacement O-Rings when removing the old ones.

1. Remove the four (4) hex bolts (A) which hold the outlet adapter (B) to the body (C). Remove the adapter (B) from the valve body.
2. Using a face spanner (found in the Style 9200 tool kit), unscrew the seat housing (D) and remove it from the valve body (C). (This is a fine thread and if the valve has been in service for a long period of time, it may be difficult to remove.)
3. Remove the two O-Rings (6 & 7) on the seat housing (D).
4. Install the seat retaining ring tool (found in the Style 9200 tool kit), in a vice with the correct size up. Place the seat housing (D) over the tool and fit the tool into the notches in the seat retaining ring (E).
5. Use the face spanner on the seat housing (D) to remove the seat retaining ring (E) from the housing. If the valve has been in service for a long time, it may be necessary to clean the threads for the seat retaining ring (E) with a hand-held wire brush.
6. Remove the seat (5) and O-Ring (4) from the seat housing (D), if so equipped.
7. Remove the threaded trunnion (F) from the bottom of the valve. Remove the old O-Ring (3).
8. Rotate the valve to the open position and remove the ball (8).

NOTES: There have been several different seats used over the years that may look different from the new seat in the service kit. The kit seat is a universal replacement. The plastic ball in the kit will fit valves equipped with a metal ball. The slot in the new ball may be 90 degrees from the slot in the original ball. To install the new ball, place it in the valve in the open position. Adjustment of the handle stop may be required to maintain the same handle, open/close quadrant.

ASSEMBLY - VALVE BODY

NOTE: Use Parker O-Ring lubricant or equivalent petroleum base lubricant for all O-Rings before assembly. Do not lubricate the valve ball (8).

1. Replace the threaded trunnion O-Ring (3).
2. Replace the ball (8) in the valve body (C) and install the trunnion (F).
3. Install the O-Ring (4) and seat (5) into the seat housing (D). Install the seat retaining ring (E).
4. Tighten the seat retaining ring (E), using the face spanner and seat retaining ring tool, until snug. DO NOT OVER TIGHTEN.
5. Install the two (2) seat housing O-Rings (6 & 7) and thread the seat housing subassembly (D) into the body (C).
6. With the ball in the closed position, adjust the seat housing until resistance is felt when opening and closing the valve. The seat (5) should just touch the ball (8). (Over tightening will cause excessive valve wear and make the valve difficult to operate.)
7. Place the valve in the closed position and test as follows:
   A. If the valve is out of the truck, hold the valve with the inlet side up and fill the body with water.
   B. If the valve is in the truck, allow the water to flow into the valve. Observe the outlet of the valve. If a leak is found, the seat housing can be tightened a 1/16 of a turn at a time with the face spanner until the leak is stopped.
8. Replace the adapter (B) and tighten the four (4) bolts (A) in an “X” pattern.

ADJUSTMENT AND REPAIR OF R* AND Y* TYPE HANDLES

DISASSEMBLY - TOP TRUNNION ASSEMBLY

1. Remove the socket head cap screw (G) that holds the handle (H) on.
2. Remove the handle from the trunnion (L). The screw that protrudes is a stop screw (J) and should be left in place unless replacing these parts.
2a. For all styles EXCEPT 828, remove stop plate and replace O-Ring (9) under stop plate.
3. Remove the four (4) recessed screws (I) which secure the trunnion bearing (K) to the body (C).
4. Pull out the trunnion (L) and trunnion bearing (K). Push the trunnion (L) out of the bottom of the trunnion bearing (K). This will expose the last two (2) O-Rings (1 & 2) which are supplied in the service kit.

NOTE: There are eight (8) threaded holes in the top of the body (C) which allow for the various handle positions.
