WARRANTY AND DISCLAIMER: We warrant Akron Brass products for a period of five (5) years after purchase against defects in materials or workmanship. Akron Brass will repair or replace product which fails to satisfy the warranty. Repairs or replacements shall be at the discretion of Akron Brass. Products must be promptly returned to Akron Brass for warranty service.

We will not be responsible for: wear and tear; any improper installation, use, maintenance or storage; negligence of the owner or user; repair or modification after delivery; damage; failure to follow our instructions or manuals; or any other cause. In no event shall Akron Brass be responsible for any special, incidental, or consequential damages to person or property arising out of or in connection with the purchase or use of the product, even if advised of the possibility of such damages, or for any loss of profits.

DESIGNED FOR NORMAL FIRE FIGHTING PRESSURES.
DO NOT OPERATE AT OVER 250 PSI.
**DISASSEMBLY**

1. Remove the (10-24) set screws (11) at the two discharge end of the wye body (10). This will require a 3/32” Allen wrench.
2. Insert a tool 3/16” square into the grooves in the male adapters (18) and remove (counterclockwise).
3. Remove the O-rings (17) located in the discharge end of the wye body.
4. Remove the seats (15) and O-rings (16) from the wye body.
5. Remove the threaded trunnions (13) on the bottom of the wye body with a 5/8” wrench.
6. Remove the O-rings (12) from the threaded trunnions.
7. Turn the handles (1) into the open position and remove the balls (14).
8. With a 5/16” punch, drive out the roll pins (2) securing the handles to the handle trunnions (5).
9. Remove the handles.
10. Mark the end of the handle trunnions and wye body so they can be reassembled in exactly the same position (Use chalk, grease pencil, etc.)
11. Remove the handle trunnions by pushing into the body.
12. Remove the O-rings (6) from the handle trunnions.
13. Remove the swivel gasket (7).

**ASSEMBLY**

**NOTE:** All O-Rings must be lubricated with O-Ring Grease before assembly.

1. Install the new swivel gasket (7).
2. Install the new O-rings (6) on the handle trunnions (5).
3. Be sure the thrust ring is seated on the trunnion. Then install the handle trunnions from inside the wye body (10), using the marks (disassembly step #10) to position properly.
4. Position the handles (1) in the open position and place them over the handle trunnions.
5. Re-install the roll pins (2) to secure the handles to the handle trunnions.
6. With the handles in the open position insert the new balls (14).
7. Install the new O-rings (12) on the threaded trunnions (13).
8. Install the threaded trunnions.
9. Install the new O-Rings (16) on the new seats (15).
10. Install the new O-Rings (17) in the discharge end of the wye body.
11. Install the new seats with O-Rings into the wye body.
12. With the handles in the closed position, thread the male adapters (18) into the wye body. (Continue tightening until resistance is felt when opening and closing the handle.)
13. Test the wye with water to determine if the wye functions properly. If a small leak is present, tighten the male adapters slightly to eliminate the leak.
14. Once the wye functions properly, observe the male adapters through the set screw hole. If a full thread is visible, drill a slight recess for the set screw (11) (use a 3/32” drill bit). Install and tighten the set screw.
