

NFPA Lower Zone A LED Lamp Kit

STYLE 4670-1000-1K

-Two 4"x6" Warning Lamps

LEDs are also available as stop, turn and tail lamps, other style of clearance marker lamps and recently introduced emergency warning lamps!

Features

NFPA Lower Zone A LED Lamp Kit • Long Life – individual LEDs are rated at over 100,000 hours of service. This results in years and years of trouble-free service! There are no replacement parts! • Sealed Unit – sonic-welded base and lens assembly eliminates problems associated with water and dust infiltration. WTI's LEDs utilize a sealed electrical connector – eliminating the concern of bad connections or faulty wires. • Low Amp Draw – LEDs require only a fraction of the amp draw of incandescent lamps. This equates to longer battery life and lower alternator loads. WTI's LEDs offer a wide voltage range 10 – 32V. • Increased Safety – "Fast on-time" for increased reaction distance, motorists will see your apparatus quicker than with halogens or incandescents! • Virtually Unbreakable – unique lamp shape and impact-resistant ABS material, this lamp can withstand direct hits that other lamps cannot. • Easy installation – WTI's design allows total surface-mount installation and mates with existing mounting hole patterns.
